

# The Catheter Compass 2.0™

**SELECTION GUIDE**

Proudly developed by BrightSky, Australia's leading continence support destination

## Using this Selection Guide

Over 5 million Australians – 1 in 4 people aged 15 years or over – experience bladder or bowel control problems.<sup>1</sup> Many types of incontinence exist and there are a variety of options available to treat and/or manage urinary and faecal incontinence.

A continence assessment conducted by a continence advisor or urologist will help identify the most appropriate continence management plan for an individual.

The Catheter Compass 2.0™ is designed to assist clinicians to select a product when a long term continence management plan is required. It does not replace clinician assessment and treatment. Although these products may be used in the situation of catheter-associated urinary tract infections (CAUTI), they do not replace traditional physician treatment methods. Where evidence is not available regarding recommended use, product peer opinion has been taken into account.

Correct catheter selection is needed to maximise client comfort and minimise adverse outcomes. The BrightSky Australia Catheter Compass 2.0™ is used in conjunction with this BrightSky Australia Selection Guide. More information on products listed in this Selection Guide can be found on the BrightSky Australia website.

The products listed in this booklet are those that were available through BrightSky Australia at the time of printing. It is subject to change. This booklet will be updated and new products added should these become available from product manufacturers.

The development of the BrightSky Australia Catheter Compass 2.0™ by Kylie Wicks, CNC, is acknowledged. Kylie Wicks MN (Research), BHIth, Dip App Sc (Nursing).

## The Catheter Compass 2.0™

Follow The Catheter Compass Product Selection Path on the following pages to help you identify the type of catheter that best meets the needs of an individual client. Then refer to the BrightSky Catheter Selection Guide to select a product of the required size and preferred brand.

The Catheter Compass 2.0™ helps healthcare professionals select the right catheter for a client when a urological or continence review has resulted in the recommendation of an intermittent or indwelling catheter.

## Indwelling Catheter required

### Client observations

No special client observations	Sediment issues experienced	Management of symptomatic infection	Management of small capacity or irritable bladder	Diagnosed compromised urethral tract	Repeated irrigation required	
No special Indwelling catheter feature required. Catheter material silicon.	No special Indwelling catheter feature required. Catheter material latex with hydrogel coating.	Non-coated catheter and/or Open tip catheter with side eyelets recommended.	Trial of Silver releasing catheter.	Short tipped catheter recommended.	Curved coude catheter recommended.	3-way catheter.

Please note that a catheter used for supra-pubic catheterisation requires minimal ridging or cuffing of the balloon on deflation to reduce associated trauma on removal.

It is essential to check manufacturer's indications for use prior to inserting an indwelling catheter.

## Intermittent Catheter required

### Client observations

No special client observations

Registered Reusable

Single Use PVC Standard Tip

Gel Reservoir

May be considered following consultation with clinician and evaluation of risk.

Additional lubricant required.

No additional lubricant required.

Urethral sensation discomfort experience

Hydrophilic

Hydrophilic with Drainage Bag

Lubricates entire urethra as catheter passes allowing for smoother insertion.

Lubricates entire urethra as catheter passes allowing for smoother insertion has inbuilt bag for ease of drainage.

Management of increased hygiene needs required

Uncoated non-touch

Non-touch applicator catheter, additional lubricant required.

The Catheter Compass 2.0™ is designed to assist clinicians to select a product when a continence management plan has been established. It does not replace clinician assessment and treatment.

## Intermittent Catheter required

### Client observations

#### Management of increased hygiene needs required

#### Difficulty passing urethral sphincter or prostatic urethra

Gel Reservoir
