The Dome Director®

Proudly developed by BrightSky, Australia's leading continence support destination

Using this Selection Guide

The DomeDirector™ assists healthcare professionals in identifying the type of uridome/sheath that best meets the client's needs when a continence assessment has resulted in the recommendation of uridome/sheath use.

A uridome/sheath is an externally worn device designed to collect urine. It is also referred to as an external catheter. It does not replace the use of an indwelling catheter nor intermittent catherisation.

Uridomes/sheaths come in varying lengths, widths and adhesive types. One type will not suit everyone. Prior to use, it is important to asses the width, length and skin integrity of the penis correctly.

More information on products listed in this Selection Guide can be found on the BrightSky Australia website. All products can also be ordered through BrightSky Australia.

The development of the BrightSky Australia DomeDirector™ by Kylie Wicks MN (Research), BHlth, Dip App Sc (Nursing), CNC, is acknowledged.

The products listed in this booklet are those that are available through BrightSky Australia at the time of printing. It is subject to change. This booklet will be updated and new products added should these become available from product manufacturers.

How to use The Dome Director®

Step 1

Measure the width of the penis using the DomeDirector™ Sizing Guide.

Step 2

Then measure the length of the flaccid penis with the DomeDirector™ Sizing Guide and note if length variance occurs with the change of position. The uridome should be fitted using the position that provides the most accurate length.

Step 3

Consider the individual client requirements as listed to the right and then refer to the DomeDirector™ Selection Guide.

The DomeDirector™

The DomeDirector™ Sizing Guide

The DomeDirector™ has been designed to assist clinicians select a product when a continence management plan has been established. It does not replace a clinician assessment. The DomeDirector™ has been developed on the basis that products perform as indicted by the manufacturer. Application requirements vary and BrightSky recommends that you refer to the manufacturer product information leaflet prior to using a particular uridome/sheath.

Where evidence is not available regarding recommended use, product peer opinion has been taken into account.

Please contact BrightSky for your brand neutral sizing tool.

Helpful Tips

Adhesion of the uridome/sheath

The length to which a uridome/sheath is to be unrolled prior to its application varies. Always refer to the manufacturer's instructions prior to use.

One-Piece

A One-Piece uridome/sheath will either be self-adhesive or require skin glue or adhesion to the penis. Immediately after applying a self-adhesive uridome/sheath, it may be helpful to apply gentle hand pressure for up to 5-10 seconds around it to ensure activation of the adhesive. When using a uridome/sheath that requires glue, only use skin glue designed for this purpose and refer to the manufacturer's instructions for glue application as air time may vary.

Two-Piece

A Two-Piece uridome/sheath refers to when uridome/sheath adhesive tape is used to provide the adhesion between the penis and the uridome/sheath. Remember to only use tape specifically designed for uridome/sheath use as applying alternative tapes may result in trauma to the penis. As uridome/sheath tape can be applied in different ways, always read the manufacturer's instructions prior to use.

Note any lotions/moisturisers applied to the penis may interfere with uridome/sheath adhesion. A fenestrated cloth may be of assistance to keep pubic hair out of the way when applying the uridome/sheath.

Removal of the uridome/sheath

When removing the uridome/sheath, gently roll it from the penis. This may be easier with warm soapy water. It is important to remove all adhesive residue as it may interfere with future successful uridome/sheath adhesion. An adhesive remover may be necessary.

What type of leg bag should be used with a uridome/sheath?

A uridome/sheath is an external system and a non-sterile bag is connected for drainage collection. The length of bag tubing is dependent on where the person wishes to wear the leg bag, however a certain amount of tubing is required for movement and position change. Always remember to support the leg bag with either straps or a holder to prevent tugging on the uridome/sheath.

As it is an external system, the uridome/sheath can be connected directly to a night bag or a drainage bottle that does not have an anti-reflux valve. In the case of a high pressure void, it may be beneficial not to have an anti-reflux valve as the anti-reflux valve may slow down drainage.

The final consideration when choosing a bag is deciding on the type of tap preferred for ease of emptying.
